

Washington State Patrol Toxicology Laboratory Division

2023-TLD-04: Case List - Evidence items stored in the Federal Way Toxicology Laboratory Vault-Fridge Bulk on September 25, 2023 when it was discovered that the temperature was outside of the Laboratory's range of acceptability (average 2-8 °C)

This table is provided for informational purposes only.

NOTE: List includes cases with evidence items stored in the Vault-Fridge Bulk on September 25, 2023 when it was discovered that the temperature was outside of the Laboratory's range of acceptability (average 2-8 °C). On discovery, the refrigerator temperature was -21 °C and contained evidence items from cases currently unassigned (no Test Report issued). Toxicology Division personnel evaluated each evidence item container for any damage and/or breakage due to the change in temperature. Where possible, evidence from damaged containers was transferred to a new labelled vacutainer tube.

Evidence Transferred to New Container - indicates if evidence was able to be transferred to new container. Y = transfer complete; N = no transfer possible; N/A = no damage to original container

For additional information on a specific case, contact the laboratory at toxlab@wsp.wa.gov.

Washington State Patrol Toxicology Laboratory Division

2023-TLD-04: Case List - Evidence items stored in the Federal Way Toxicology Laboratory Vault-Fridge Bulk on September 25, 2023 when it was discovered that the temperature was outside of the Laboratory's range of acceptability (average 2-8 °C)

This table is provided for informational purposes only.

NOTE: List includes cases with evidence items stored in the Vault-Fridge Bulk on September 25, 2023 when it was discovered that the temperature was outside of the Laboratory's range of acceptability (average 2-8 °C). On discovery, the refrigerator temperature was -21 °C and contained evidence items from cases currently unassigned (no Test Report issued). Toxicology Division personnel evaluated each evidence item container for any damage and/or breakage due to the change in temperature. Where possible, evidence from damaged containers was transferred to a new labelled vacutainer tube.

Evidence Transferred to New Container - indicates if evidence was able to be transferred to new container. Y = transfer complete; N = no transfer possible; N/A = no damage to original container

For additional information on a specific case, contact the laboratory at toxlab@wsp.wa.gov.

2023-TLD-04: Case List - Evidence items stored in the Federal Way Toxicology Laboratory Vault-Fridge Bulk on September 25, 2023 when it was discovered that the temperature was outside of the Laboratory's range of acceptability (average 2-8 °C)

This table is provided for informational purposes only.

NOTE: List includes cases with evidence items stored in the Vault-Fridge Bulk on September 25, 2023 when it was discovered that the temperature was outside of the Laboratory's range of acceptability (average 2-8 °C). On discovery, the refrigerator temperature was -21 °C and contained evidence items from cases currently unassigned (no Test Report issued). Toxicology Division personnel evaluated each evidence item container for any damage and/or breakage due to the change in temperature. Where possible, evidence from damaged containers was transferred to a new labelled vacutainer tube.

Evidence Transferred to New Container - indicates if evidence was able to be transferred to new container. Y = transfer complete; N = no transfer possible; N/A = no damage to original container

For additional information on a specific case, contact the laboratory at toxlab@wsp.wa.gov.

2023-TLD-04: Case List - Evidence items stored in the Federal Way Toxicology Laboratory Vault-Fridge Bulk on September 25, 2023 when it was discovered that the temperature was outside of the Laboratory's range of acceptability (average 2-8 °C)

This table is provided for informational purposes only.

NOTE: List includes cases with evidence items stored in the Vault-Fridge Bulk on September 25, 2023 when it was discovered that the temperature was outside of the Laboratory's range of acceptability (average 2-8 °C). On discovery, the refrigerator temperature was -21 °C and contained evidence items from cases currently unassigned (no Test Report issued). Toxicology Division personnel evaluated each evidence item container for any damage and/or breakage due to the change in temperature. Where possible, evidence from damaged containers was transferred to a new labelled vacutainer tube.

Evidence Transferred to New Container - indicates if evidence was able to be transferred to new container. Y = transfer complete; N = no transfer possible; N/A = no damage to original container

For additional information on a specific case, contact the laboratory at toxlab@wsp.wa.gov.

2023-TLD-04: Case List - Evidence items stored in the Federal Way Toxicology Laboratory Vault-Fridge Bulk on September 25, 2023 when it was discovered that the temperature was outside of the Laboratory's range of acceptability (average 2-8 °C)

This table is provided for informational purposes only.

NOTE: List includes cases with evidence items stored in the Vault-Fridge Bulk on September 25, 2023 when it was discovered that the temperature was outside of the Laboratory's range of acceptability (average 2-8 °C). On discovery, the refrigerator temperature was -21 °C and contained evidence items from cases currently unassigned (no Test Report issued). Toxicology Division personnel evaluated each evidence item container for any damage and/or breakage due to the change in temperature. Where possible, evidence from damaged containers was transferred to a new labelled vacutainer tube.

Evidence Transferred to New Container - indicates if evidence was able to be transferred to new container. Y = transfer complete; N = no transfer possible; N/A = no damage to original container

For additional information on a specific case, contact the laboratory at toxlab@wsp.wa.gov.

2023-TLD-04: Case List - Evidence items stored in the Federal Way Toxicology Laboratory Vault-Fridge Bulk on September 25, 2023 when it was discovered that the temperature was outside of the Laboratory's range of acceptability (average 2-8 °C)

This table is provided for informational purposes only.

NOTE: List includes cases with evidence items stored in the Vault-Fridge Bulk on September 25, 2023 when it was discovered that the temperature was outside of the Laboratory's range of acceptability (average 2-8 °C). On discovery, the refrigerator temperature was -21 °C and contained evidence items from cases currently unassigned (no Test Report issued). Toxicology Division personnel evaluated each evidence item container for any damage and/or breakage due to the change in temperature. Where possible, evidence from damaged containers was transferred to a new labelled vacutainer tube.

Evidence Transferred to New Container - indicates if evidence was able to be transferred to new container. Y = transfer complete; N = no transfer possible; N/A = no damage to original container

For additional information on a specific case, contact the laboratory at toxlab@wsp.wa.gov.
