

### Retrospective Review Case List - Methamphetamine Results

This table lists cases with an amines confirmation test performed 7/1/2020 to 1/22/2021 (date cases currently being tested were required to be screened by LC-TOF-MS). Scope of the retrospective review was comparison of the qualitative identification/estimated concentration from LC-TOF-MS screen results to results of LC/MS/MS confirmation analysis. For cases with LC-TOF-MS and LC/MS/MS testing performed, no discrepancies in methamphetamine results were identified. Case note "evidence not available for additional testing" denotes LC-TOF-MS analysis was not performed, as specimens were returned to the submitting agency or disposed (according to evidence retention procedures, with notification to submitting agency). Matrices other than blood (e.g., urine, spleen squeeze, decomposition specimens) are not suitable for analysis by LC-TOF-MS.

**Table below provides case identifier and submitting agency for informational purposes only. For additional information on specific case results, contact the laboratory at 206-262-6100 or [toxlab@wsp.wa.gov](mailto:toxlab@wsp.wa.gov).**

### Retrospective Review Case List - Methamphetamine Results

This table lists cases with an amines confirmation test performed 7/1/2020 to 1/22/2021 (date cases currently being tested were required to be screened by LC-TOF-MS). Scope of the retrospective review was comparison of the qualitative identification/estimated concentration from LC-TOF-MS screen results to results of LC/MS/MS confirmation analysis. For cases with LC-TOF-MS and LC/MS/MS testing performed, no discrepancies in methamphetamine results were identified. Case note "evidence not available for additional testing" denotes LC-TOF-MS analysis was not performed, as specimens were returned to the submitting agency or disposed (according to evidence retention procedures, with notification to submitting agency). Matrices other than blood (e.g., urine, spleen squeeze, decomposition specimens) are not suitable for analysis by LC-TOF-MS.

*Table below provides case identifier and submitting agency for informational purposes only. For additional information on specific case results, contact the laboratory at 206-262-6100 or [toxlab@wsp.wa.gov](mailto:toxlab@wsp.wa.gov).*

### Retrospective Review Case List - Methamphetamine Results

This table lists cases with an amines confirmation test performed 7/1/2020 to 1/22/2021 (date cases currently being tested were required to be screened by LC-TOF-MS). Scope of the retrospective review was comparison of the qualitative identification/estimated concentration from LC-TOF-MS screen results to results of LC/MS/MS confirmation analysis. For cases with LC-TOF-MS and LC/MS/MS testing performed, no discrepancies in methamphetamine results were identified. Case note "evidence not available for additional testing" denotes LC-TOF-MS analysis was not performed, as specimens were returned to the submitting agency or disposed (according to evidence retention procedures, with notification to submitting agency). Matrices other than blood (e.g., urine, spleen squeeze, decomposition specimens) are not suitable for analysis by LC-TOF-MS.

**Table below provides case identifier and submitting agency for informational purposes only. For additional information on specific case results, contact the laboratory at 206-262-6100 or [toxlab@wsp.wa.gov](mailto:toxlab@wsp.wa.gov).**

### Retrospective Review Case List - Methamphetamine Results

This table lists cases with an amines confirmation test performed 7/1/2020 to 1/22/2021 (date cases currently being tested were required to be screened by LC-TOF-MS). Scope of the retrospective review was comparison of the qualitative identification/estimated concentration from LC-TOF-MS screen results to results of LC/MS/MS confirmation analysis. For cases with LC-TOF-MS and LC/MS/MS testing performed, no discrepancies in methamphetamine results were identified. Case note "evidence not available for additional testing" denotes LC-TOF-MS analysis was not performed, as specimens were returned to the submitting agency or disposed (according to evidence retention procedures, with notification to submitting agency). Matrices other than blood (e.g., urine, spleen squeeze, decomposition specimens) are not suitable for analysis by LC-TOF-MS.

**Table below provides case identifier and submitting agency for informational purposes only. For additional information on specific case results, contact the laboratory at 206-262-6100 or [toxlab@wsp.wa.gov](mailto:toxlab@wsp.wa.gov).**

### Retrospective Review Case List - Methamphetamine Results

This table lists cases with an amines confirmation test performed 7/1/2020 to 1/22/2021 (date cases currently being tested were required to be screened by LC-TOF-MS). Scope of the retrospective review was comparison of the qualitative identification/estimated concentration from LC-TOF-MS screen results to results of LC/MS/MS confirmation analysis. For cases with LC-TOF-MS and LC/MS/MS testing performed, no discrepancies in methamphetamine results were identified. Case note "evidence not available for additional testing" denotes LC-TOF-MS analysis was not performed, as specimens were returned to the submitting agency or disposed (according to evidence retention procedures, with notification to submitting agency). Matrices other than blood (e.g., urine, spleen squeeze, decomposition specimens) are not suitable for analysis by LC-TOF-MS.

**Table below provides case identifier and submitting agency for informational purposes only. For additional information on specific case results, contact the laboratory at 206-262-6100 or [toxlab@wsp.wa.gov](mailto:toxlab@wsp.wa.gov).**
