

Omnixx Force

Alternate Routing for Printer

In Omnixx Force open Alternate Routing (_ALT) from the Agency Function Maintenance Menu

From the dropdown box, in the “Mode (AMOD)” field, choose how you want your printer to respond

C-Copy to a Specified Device

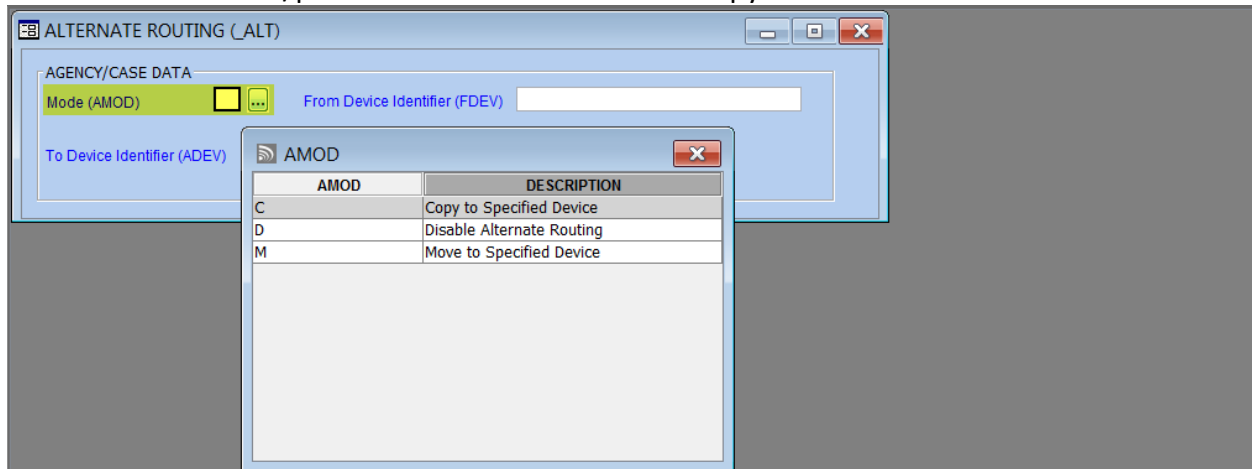

This will send a copy of anything being printed from one device/printer to an additional device/printer – both devices/printers get copies

D-Disable Alternate Routing

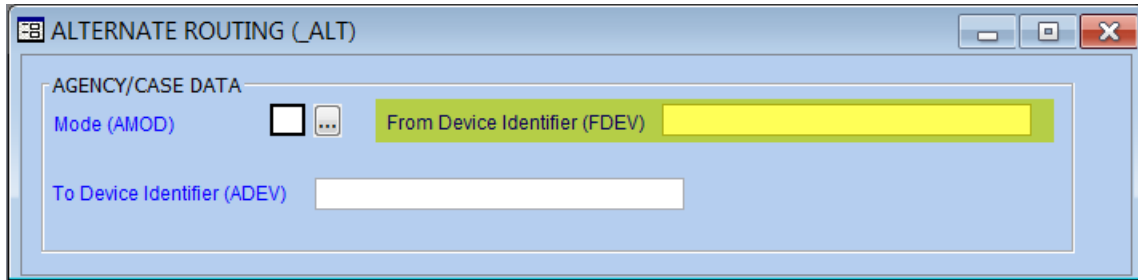

This will cancel any alternate routing that is set up for your device/printer

M-Move to Specific Device

This will move all printing from one device to another device – only the device/printer routed to will receive a copy

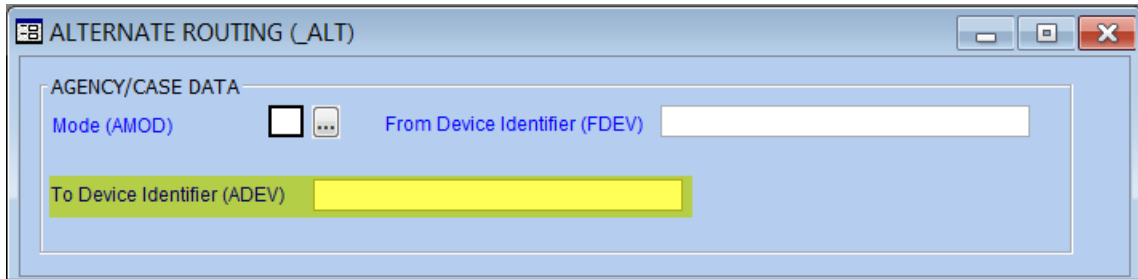

In the "From Device Identifier (FDEV)", place the Device ID for whichever Device ID/printer you want to reroute

The screenshot shows a window titled "ALTERNATE ROUTING (_ALT)". Inside, there is a section labeled "AGENCY/CASE DATA". Below this, there is a "Mode (AMOD)" label with an unchecked checkbox and a button with three dots. To the right of this is the "From Device Identifier (FDEV)" label followed by a text input field that is highlighted in yellow. Below that is the "To Device Identifier (ADEV)" label followed by an empty text input field.

In the "To Device Identifier (ADEV)" field, place the Device ID for where you want the alternate routing/printing to go

The screenshot shows the same "ALTERNATE ROUTING (_ALT)" window. In this view, the "From Device Identifier (FDEV)" field is empty, and the "To Device Identifier (ADEV)" field is highlighted in yellow.
